READ FIRST!!!

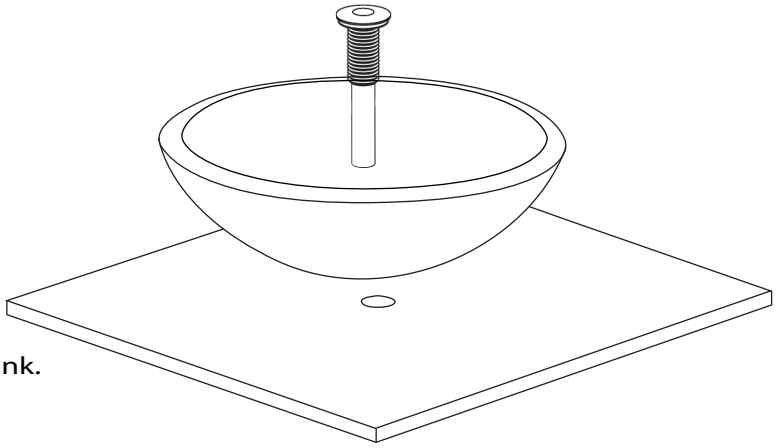
Observe all local plumbing and building codes.

Follow these instructions only if it applies to your installation. Vessel sinks allow you to be creative and flexible with your installation.

Before installation, remove your new Stainless sink and carefully inspect it for damage. Return the Stainless sink to its packaging until you are ready to install it.

We strongly recommend having the sink on site before cutting your countertop.

These instructions contain important care and cleaning instructions. Please review these instructions carefully.



ABOVE COUNTER/ TOPMOUNT INSTALLATION

STEP 1:
Carefully set the sink in the outlined drain hole opening.

STEP 2:
To secure the sink on the countertop, use a silicon sealer.
Use moderate force and hand-tighten the drain kit to the sink.

STEP 3:
Install the faucet and drains according to the manufacturer's instruction manual.

CARE INSTRUCTIONS

Clean your stainless steel sink with a soft washcloth and warm water, wiping the sink in the direction of the polish marks. Use another soft towel to dry the surface once cleaned. If left to air dry stainless steel sinks may spot and streak. When regular dish soap doesn't remove grease and grime you may use white vinegar then rinse with warm water and towel dry. Stainless steel is durable, but not indestructible. Never use cleaners that contain chlorine or bleach as they can damage your sink. Also avoid steel and wool scrub brushes as they can leave scratches, use a soft towel instead. Lastly, rather than leaving wet sponges in your sink we advise that you use a cup or plate to avoid constant wetness to reduce the risk of rust from long-term exposure to water.

** **NOTE:** Sink model, design, shape, cutout on top, vanity may vary from the picture above.
